ProLipo™

Laser Body Contouring

Fat reduction with quick results
and minimal downtime

Aesthetic Multi Laser Center

SCITON®

benefits

- Very rapid results
- Minimal down-time
- Minimal bruising and discomfort
- Fast treatment time

Watch your body take a new shape!

Laser Lipolysis with Sciton's ProLipo™ system is the new, **minimally invasive** way to remove fat!

How does ProLipo work?

ProLipo delivers laser energy through a slender fiber directly to areas of body fat, liquefying the fat cells while contouring the body. The final result is the removal of targeted body fat and a firm, more attractive body contour.

What areas can be treated?

Any area of the body that has pockets of unwanted body fat can be improved with ProLipo. Popular areas are under the chin, abdomen, love handles, saddle bags, inner and outer thighs, bra roll, back, even knees and ankles!

Who is a candidate for this procedure?

The ideal candidate for ProLipo is reasonably fit, with localized pockets of fat. But your physician is best qualified to answer such questions. Ask about laser lipolysis with ProLipo!

How many ProLipo treatments will I need?

Typically, only one treatment is required.

What should I expect after treatment?

Results are typically visible very soon after treatment and will continue to improve over several months. Your physician may suggest wearing a compression garment for a brief period.

What are the benefits of ProLipo compared to traditional liposuction?

- Faster recovery – significantly shorter downtime with return to normal activity typically a few days rather than weeks. In the words of one physician, "You'll be up and around quickly – although for several days you'll feel a bit sore, like after a strong workout."
- ProLipo is done in a procedure room setting under local anesthesia rather than in a hospital or surgical center setting with deep sedation or general anesthesia.
- Your skin will feel and look tighter, your body more contoured.

patients' testimonials

"It was a great experience. I had some mild discomfort and tenderness afterward, but the end result was well worth it. I would recommend it to anyone – and I have."
– Teresa C.

"The process was fabulous. An easy procedure and the recovery was unbelievable, with limited swelling and no bruising. I was ready to rock and roll the next day. Compared to regular liposuction, ProLipo was much easier with less discomfort. Compared to Lipo-dissolve, it was much more tolerable, with immediate results, and the discomfort didn't last as long. Not having to worry about the long recovery was a major plus for me over the other options."
– Lisa P.

"As a lifetime athlete, I had reached a stage in my life where I realized I had gotten older and put on weight. I attempted to improve my health by exercise and diet, however, there were areas of fat that no amount of hard work would eliminate. I had ProLipo which targeted the areas I struggled with. This treatment has achieved considerable improvement without all the hard work."
– Megan H.
